

A Time to Remember

World War 1 Centenary and D Day 70th Anniversary

Remember those special to you and help nature to bloom by planting these nectar and pollen rich wild flower seeds that will encourage butterflies moths, bees and hoverflies into your garden whilst creating a blaze of summer colour.

This mix of both Long Headed and Corn Poppies can easily be grown in any sunny position, container or border to create a stunning rich red display.

Simply sow the seeds onto an area of prepared and raked soil or in tubs and containers. Sprinkle the seeds evenly, water well and in around 12 weeks you will see your first blooms.

At the end of the summer either collect and thoroughly dry the ripe seed Ready to re-sow the following season or allow the seed to fall onto the ground, then the following season rake the area over to trigger the germination again.

Remember... by Filling Fareham with Flowers

- *Seed sufficient for one square metre*
- *Can be sown in spring or early autumn*
- *Do not scatter in the countryside*
- *Caution – harmful if eaten!*
