

# FAREHAM

## BOROUGH COUNCIL

### **Report to Streetscene Policy Development and Review Panel**

**Date**                    **5 September 2013**

**Report of:**           **Director of Street Scene**

**Subject:**             **STREET LIGHTING**

#### **SUMMARY**

The purpose of this report is to update members on the current arrangements for the maintenance of street lights currently owned by Fareham Borough Council.

#### **RECOMMENDATION**

Members are asked to recommend to the Executive that the remaining 62 street lights should be transferred to the Hampshire County Council Street Lighting Public Finance Initiative.

## **INTRODUCTION**

1. The purpose of this report is to update members on the current maintenance arrangements for street lights currently owned by Fareham Borough Council.

## **FAREHAM STREET LIGHTS**

2. Historically, 444 of the Council's lights were maintained under agreement by Hampshire County Council (HCC) as part of its countywide contract. These were made up as follows:
  - (a) Housing parking areas and footpaths – 126
  - (b) Recreational paths and community centres – 20
  - (c) Footpaths and other non-highway authority lighting – 298
    - i. Town centre: public areas, Henry Court millennium project, public footpaths etc.
    - ii. Car parks
    - iii. Borough wide estate parking areas, footpaths and private streets such as Brownwich Lane
3. However, there are 62 columns in various locations that were being maintained outside of this contract.
4. At the time many of these were installed, HCC would not include them into their maintenance contract but gave indications that they could be included in any future PFI scheme.

## **STREET LIGHTING PRIVATE FINANCE INITIATIVE (PFI)**

5. In December 2009, Hampshire County Council entered into a Private Finance arrangement with Scottish and Southern Electricity for the maintenance of its street lighting stock for a period of 25 years. All boroughs in Hampshire were invited to join the scheme, including Fareham.
6. The key points of the scheme are summarised below:
  - (a) Lights more than 15 years old would be replaced during the first five years;
  - (b) A government grant would cover the cost of the new columns;
  - (c) Columns of decorative design or in a conservation area would be replaced like for like;
  - (d) New equipment would use less energy and provide flexibility of control to help meet sustainability and procurement objectives and carbon emission targets;
  - (e) Single point of contact for street lighting throughout Hampshire;
  - (f) The estimated maintenance cost (at the time) for each column included in the scheme would be in the range of £35-40 per annum.
7. It was agreed by the Council's Executive Committee on 20 July 2009 that Fareham's 444 lights should be included in the PFI.

8. However, the remaining 62 light columns were not included and therefore their maintenance would be undertaken by FBC Officers as and when required.

### **CURRENT SITUATION**

9. From the start of the PFI contract in Dec 2009, the responsibility for maintaining Fareham's remaining 62 street lights was transferred to the Department of Streetscene
10. Requests to undertake repairs on any of the Council's lights are processed through the Council's Building Services maintenance contractors and on occasions can be quite expensive and time consuming due to the need to hire equipment not normally used such as platform lifts to replace a light fitting.
11. Many of the lights are linked into electrical supplies that arise from adjoining Council buildings e.g. public conveniences, and this is probably why HCC did not want to include them into the PFI contract as the adoption of these lights would result in alterations to the supply connections.
12. There is currently no formal inspection regime and the condition of the lamp columns and lamps have not been assessed. Therefore it is not possible to identify the life expectancy of the current asset stock. It is highly likely that they will need replacement within the next 10 to 20 years.
13. Due to the fact that across the borough, the PFI contractor has been replacing a large proportion of street lights, it has highlighted that more lights that are not included in the contract. Originally it was thought that there were only 44 outstanding but that has risen to the current figure of 62. Of the 13,728 street lights in Fareham, 1873 are still outstanding for replacement and therefore there is a small chance that a few more lights may be identified as belonging to Fareham Council.

### **TRANSFERRING LIGHTS TO THE PFI**

14. Officers have been working closely with HCC especially whilst the contractor has been working in Fareham. Over the last six months Officers have also been liaising directly with Scottish and Southern Energy (SSE) Contracting in order that quotes could be obtained to possibly include the 62 lights not already in the contract.
15. Due to the fact the SSE are extremely busy installing new lights all over the County it has been a long process and the actual final figures have not been obtained in all instances. However, for the purpose of this report a good estimate has been provided instead.
16. A summary of the capital costs of this exercise can be found further in the report but it is fair to say that costings for groups of lights varies considerably depending on where they are located and whether new cabling has to be laid to connect them to the existing street lighting circuit. Detailed information can be found in Appendix B.
17. A further report to the Executive will be prepared if members support the idea of transferring the lights in principle.

## **BENEFITS OF INCLUSION IN THE PFI**

18. There are a number of benefits of including the remaining street lights into the current PFI contract, these are as follows:-
- (a) There would only be one point of contact for all street lighting issues in the borough, regardless of whether they belong to HCC or FBC;
  - (b) All issues arising in relation to street lights would be automatically dealt with for the remainder of the contract which is approximately 21 years;
  - (c) Reported faults would be dealt with in a more timely efficient way as residents would be able to report the faults on line via the HCC/PFI website; see Appendix A
  - (d) Other than the on-going revenue needed to fund the electricity and maintenance costs, all other expenditure would be the responsibility of the PFI, e.g. damage caused by road traffic accident, vandalism etc;
  - (e) The lights to be transferred would be upgraded where necessary to more efficient technology with energy saving timers and more efficient lighting units;

## **FINANCIAL IMPLICATIONS**

### **Capital Budget**

19. Appendix B provides a detailed breakdown of the capital costs that are attributed to the transferring of all 62 lights.
20. The estimated costs are likely to be in the region of £80,000. Due to fact that it has taken over nine months to obtain the various quotes it is probable that these may rise due to the rates being subject to an increase imminently.
21. It is therefore suggested that a budget of £85,000 would need to be allocated to fully cover the works outlines.

### **Revenue budget**

22. The revenue budget for 13/14 is shown below. The actual figures for 11/12 and 12/13 are also shown.

<b>Actual 11/12</b>	<b>Actual 12/13</b>	<b>Budget 13/14</b>
£15,431	£16,258	£19,800
£13,159	£10,418	£12,000

23. The costs are split into two payments, the first relates to the actual maintenance costs of the lights which for 2013/14 are £33.86 per column per year plus 8% admin charge. This cost of which has slightly risen year on year.
24. The second figure relates to the supply of electricity and does fluctuate, although the current trend shows a year on year reduction, which is probably due to the installation of more efficient light columns.
25. Should the Council proceed with transferring all of the 62 lights to the PFI then there

would be an estimated increase in revenue cost of £2133 per annum for routine maintenance and inspection. At the current time there are sufficient funds within the existing budgets to accommodate this.

26. With regard to the energy supply, the Council already pays towards this, albeit from a number of different costs centres such as Housing, car parks etc. Therefore, transferring them into the PFI wouldn't have any real effect on this cost other than it might reduce due to HCC getting a better rate within the contract due to economies of scale.

27. It is therefore considered, that at the current time, there is no budgetary pressure on the revenue budget should the lights be ultimately transferred to the PFI.

### **RISK ASSESSMENT**

28. There are no significant risk considerations in relation to this report.

### **CONCLUSION**

29. The current PFI contract arrangement which exists and includes over 444 of Fareham's street lights is working well and provides a very quick and efficient service to the residents of Fareham.

30. A large proportion of the street lights have already been replaced across the borough, with the remaining soon to be completed.

31. It would be beneficial to incorporate the remainder of the street lights not currently in the PFI contract to enable a more prompt and efficient service in maintaining and repairing the lights.

32. All future street light installations in the borough, regardless of which department wishes to implement them, should be undertaken in accordance with current SSE specifications and with a view to them ultimately being included in the PFI.

33. Members are asked to support the proposal in principle should there be sufficient funds available to include them.
